Not illustrated. 1907 Excerpt: .central scotoma, too small to map out with the perimeter. In the periphery of the fundus in the upper and outer quadrant a white area can be seen with a little pigmentation around it. This possibly indicates the site of one of the scleral punctures. The chief feature of interest in this case is, I think, the remarkable improvement that on each occasion immediately followed puncture of the sclerotic, which seems to prove that the policy of masterly inactivity often recommended in the treatment of these cases is not always the best possible. Note added July 30th, 1907.--Patient was seen again on March 23rd; there was no sign of recurrence, and vision was still-j-g, with correction. He wrote on July 2nd to say that there had been no return of the trouble; if anything, vision was improving. He could read rather smaller print with the eye....
